## Specification

Actual Power	18W	Size	600mm
Lumens	1400	Output Current	/
Output Voltage	/	LED Quantity	/
Lifespan	30,000 Hours	Commercial Type	T5
Working Frequency	/	CCT	warm light 3000K, cold light 5700K
Weight	/	Coverage area	/
LM/W	80/100	Material	high-quality PC

## Description:

T5 Led tube lights are commonly used in offices and stores and commercial buildings. The fluorescent lamps can be highly efficient, but poorly made older ballasts can produce noxious gases upon overheating. T5 Led tube lights are seen as the direct replacement for the T5 LED tube lights that have been on the market for many years. The newer tubes come with better technology and they are far more efficient than the previous models, thus it resulting in you getting the same amount of light but using a fraction the electricity to do so. T5 Led tube lights have advantages over fluorescent tubes: lower energy consumption, longer life, improved robustness, smaller size, and the ability to be switched on and off faster. T5 LED lamps are normally used in commercial or institutional buildings, and are frequently installed LED in troffer light fixtures (recessed troughs install LED in a ceiling) and pendant light fixtures ( housings suspended from a ceiling by a chain or pipe). With the standard T5 narrow bi-pin fitting these tube will fit into all standard T5 fixtures.

## Benefits of T5 LED tube light:

1. Replacing conventional fluorescent lamp (T8 & T10)
2. High luminous efficiency, low power consumption,
3. Energy-saving, it can save 60% energy than fluorescent tubes
4. Eco-friendly, no UV radiation, no mercury, no flicker, no harm to human eyes.

---

5. Long life span, it can last 30000 hours.

6. T5 LED tube is easy to install.

**Application:** table lamp, crystal chandelier, wall lamp, down light and so on.
